FORCE Certification is accredited to certify for the Swedish Online Gambling Market.

Version

This version of the report is in English, and it is version 0.

Version Number	Date	Change	Creator
0	22nd June 2026	Original Version	Morten Bech Højgaard

Scope

Evaluation of webpage polarlotto.com, polarlotto.se, miljardlotteriet.se, impactwin.se, lottoexperten.se in accordance with SIFS 2022:3.

Conclusion

FORCE Certification has passed and certified SverigeLotto Ltd for the Swedish Online Gambling Market. Based upon "Gambling Act 2018:1138", "Gambling Ordinance (2018:1475)" and "SIFS 2022:3 The Swedish Gambling Authority's regulations and general advice on technical requirements and accreditation of bodies for inspection, testing and certification of gambling service providers".

According to the test results, FORCE Certification confirms that the item submitted from SverigeLotto Ltd is compliant with the regulations.

SIFS 2022-3 - Swedish Gambling Authority's regulations and general advice on technical requirements and accreditation of bodies for inspection, testing and certification of gambling service providers

Chapter 4 The license holder's information security

Requirement	**Comment** (In "…" is mentioned documentation)
1 § Important information must be protected from physical and logical breaches and other external influence, and the information must be available when needed.	Pass, FORCE Technology received documentation to fulfill the paragraph
2 § There must be a policy and procedures to regulate employee authorisations in gambling and ERP systems. A corresponding policy, establishment of access descriptions and procedures as described in the first paragraph, must be written for other persons who need access to gambling and ERP systems. Policies and procedures must be documented and regularly updated.	Pass, FORCE Technology received documentation to fulfill the paragraph. Documentation: "Acceptable User Policy" and "Data Protection Policy" - "System Access Control Policy" - "Physical Security Policy"
Access restrictions	
3 § The gambling and ERP systems must be placed in an area adapted for the purpose. All entry points to the area where the gambling and ERP systems are handled or stored must be guarded by personnel or technical equipment for access control. The scope of this access control must be adapted to the regulations regarding risk and vulnerability analyses set out in Chapter 5. Passcards codes and keys to areas where the gambling and ERP systems are being handled or stored must be controlled to ensure that there is no unauthorised access.	Pass, FORCE Technology received documentation to fulfill the paragraph Documentation: "Acceptable User Policy" and "Data Protection Policy" - "System Access Control Policy" - "Physical Security Policy"
4 § Systems for operation and testing must be logically separated. Systems for testing of generation and validation, as well as actual generation and validation of bases for physical lottery tickets must be logically separated.	Pass, FORCE Technology received documentation to fulfill the paragraph. Documentation: "Acceptable User Policy" and "Data Protection Policy" - "System Access Control Policy" - "Physical Security Policy"
Authentication

Requirement	Comment (In "…" is mentioned documentation)
5 § Gambling and ERP systems must be equipped with technical and administrative measures to identify the user, the user's system authorisation and registration of the user's activities. All access to the gambling and ERP systems must be registered. Codes, passwords or equivalent for the gambling and ERP systems are personal and may not be disclosed or shared, and they must be provided with a level of protection appropriate for the information.	Pass, during audit this was demonstrated during audit to FORCE Certification. Documentation: "Software Development Life Cycle Policy" & "System changes" & Information Security Policy"
6 § The gambling and ERP systems must have a function that continuously registers user identity, date and time of login and logout, and any other activities of relevance to information security.	Pass, during audit this was demonstrated during audit to FORCE Certification.
7 § Events outside the technical equipment that have an impact on the gambling and ERP systems must be registered.	Pass, during audit this was demonstrated during audit to FORCE Certification. Documentation: "Physical Security Policy"
Communication and operation	
8 § It must be possible to safely shut down the gambling and ERP systems in the event of disruption or failure in the electricity supply or communications. There must be an auxiliary power system to safeguard data integrity, register history, backup data and allow games that are in progress to come to an end.	Pass, FORCE Technology received documentation to fulfill the paragraph.
9 § The gambling and ERP systems must have a function that registers all attempts at unauthorised access to the system and other events, and which creates event reports with time stamps.	Pass, during audit this was demonstrated during audit to FORCE Certification. FORCE have seen examples.
10 § The gambling and ERP systems must be protected against unauthorised intrusion and the insertion of unauthorised and malicious code. The gambling and ERP systems must have a function to discover malicious code. There must be documented procedures for updating protection against unauthorised and malicious code.	Pass, FORCE Technology received documentation to fulfill the paragraph. Documentation: "System Access Control Policy & Software Development Life Cycle Policy"

Requirement	Comment (In "…" is mentioned documentation)
11 § All system changes in accordance with Chapter 6 and any other discrepancies in the gambling and ERP systems must be monitored and registered.	Pass, during audit this was demonstrated during audit to FORCE Certification. Documentation: "Software Development Life Cycle Policy" & "System changes"
12 § The gambling and ERP systems must be backed up at least once per day. It must be ensured that the systems can be restored from the latest backup point to the time of a possible disruption	Pass, during audit this was demonstrated during audit to FORCE Certification.
13 § The gambling and ERP systems must be equipped with appropriate firewalls. Firewalls must be set up to ensure that no other equipment in the same network can create alternative network paths. Firewall access must be documented in work descriptions and access descriptions. All access to a firewall must be registered. All incidents that affect or are intended to affect the firewalls must be registered.	Pass, during audit this was demonstrated during audit to FORCE Certification. Documentation: "Software Development Life Cycle Policy" & "System changes" & "Information Security Policy" Screen shot: "PolarlottoFirewall (1)"
14 § Information must be stored and transferred securely. Files containing information revealing winnings must be handled so that no unauthorised user can copy or otherwise misuse or damage the data. If a public network is used for the transfer, the data must be encrypted, and the separate subsystems must verify the dispatch and reception and also be protected from incomplete transfers, disruption and copying and sending of unauthorised replies.	Pass, during audit this was demonstrated during audit to FORCE Certification.
15 § There must be documented procedures for the handling of portable data media. If information revealing winnings is sent on data media by post, or equivalent manner, a transport option must be selected that meets the requirements set out in Section 14, second paragraph.	Pass, FORCE Technology received documentation to fulfill the paragraph. Documentation: System Access Control Policy & Software Development Life Cycle Policy & Physical Security Policy

Requirement	Comment (In "…" is mentioned documentation)
16 § Only functions that are necessary for the purpose of installing new software shall be activated. Maintenance and updating of applications in a gambling and ERP system must be done in a secure and controlled manner.	Pass, FORCE Technology received documentation to fulfill the paragraph.
17 § Software must be identifiable by name and version number. The source code of the gambling system must have comments explaining the function of the code.	Pass, FORCE Technology received documentation to fulfill the paragraph.
Storage of registered information, events and logs	
18 § Registered information, events and logs are to be stored in accordance with Chapter 5, Section 5 of the Gambling Act (2018:1138), kept unchanged and be protected from unauthorised access. Registered information in accordance with Section 13, fourth paragraph, must be stored for at least three months.	Pass, during audit this was demonstrated during audit to FORCE Certification.
Time reference	
19 § The gambling system must register time. All information, events and logs are to be registered in real time. UTC is to be used as the time reference system.	Pass, during audit this was demonstrated during audit to FORCE Certification.

Chapter 5 The license holder's risk and vulnerability management

Requirement	Comment
1 § The license holder must carry out a risk and vulnerability analysis to systematically identify and document in a list the information assets of the gambling and ERP systems. This work also includes considering the operation's dependence on external activities. The choice of method for the risk and vulnerability analysis must be documented.	Pass, FORCE Certification have seen risk and vulnerability analysis procedure Documentation: "Asset Management Policy" - "Information asset list" - "Reports of security and information security incidents" - "Incidents Response Plan" – "Risk assessment policy"
2 § For each information asset in the list, the following information must be provided 1. a definition of the information asset; 2. a unique identification number; 3. a version number; 4. identifying features of the information asset; 5. decision maker entitled to make decisions regarding changes in the information asset; 6. internal risk evaluation; 7. checksum for information assets classified in accordance with Section 3, second paragraph, points 2–3; and 8. the geographical location of physical information assets.	Pass, FORCE Certification have seen evidence to fulfil the criteria. Documentation: "Asset Management Policy" - "Information asset list" - "Reports of security and information security incidents" - "Incidents Response Plan"

Requirement	Comment
3 § Each information asset defined in accordance with Section 2 must be classified according to the following four criteria: 1. player information – information worthy of protection; 2. integrity of the gambling and ERP systems; 3. availability of player information; or 4. traceability. Each classification must be assessed according to the following: 1. no relevance (the information asset has no impact on the respective criteria of points 1–4 in the first paragraph); 2. some relevance (the information asset may have an impact on the respective criteria of points 1–4 in the first paragraph); or 3. high relevance (the respective criteria of points 1–4 in the first paragraph are dependent on the information asset).	Pass, FORCE Certification have seen evidence to fulfil the criteria. Documentation: "Asset Management Policy" and "Information asset list"
4 § The license holder must appoint a decision maker responsible for risk and vulnerability analysis as well as management of information and incidents that may arise in accordance with this chapter. There must be documented procedures for monitoring, detection, analysis, management, reporting and registration of security and information security incidents.	Pass, during audit this was demonstrated during audit to FORCE Certification "Asset Managment Policy", "Information asset list", "Assessment Policy"
5 § There must be a function and documented procedures for the management of breaches and attempted breaches of the gambling and ERP systems. All intrusions and attempted intrusions of the gambling and ERP systems must be registered.	Pass, during audit this was demonstrated during audit to FORCE Certification Documentation: "Risk assessment Policy", "Responsible Disclosure Policy", "Vulnerability Management Policy"

Chapter 6 The license holder's system changes

Requirement	Comment
1 § There must be a documented process for version management and a version management system for updates or changes of the information assets listed in accordance with Chapter 5, Section 2.	Passed, FORCE Technology. Have seen "Change Management Procedure" and "Information assets list"
2 § Updates or changes to an information asset classified as critical and of high relevance in accordance with Chapter 5, Section 3, second paragraph, must immediately be reviewed by an accredited body. Updates or changes to an information asset that has been classified as having some relevance in accordance with Chapter 5, Section 3, second paragraph, must be reviewed in conjunction with the regular certification process pursuant to Chapter 2, Section 3, first paragraph.	Pass, there are no operational examples yet, but the Change Management Procedure is reviewed.
3 § If there is an internal function managing quality assurance of updates or changes to information assets, the accredited body may approve changes being made without review pursuant to Section 2, first paragraph, provided that 1. the function is organisationally separate from the function implementing the updates or changes, and 2. the function has personnel with adequate training and experience. Updates or changes to an information asset in accordance with the first paragraph must be reviewed in conjunction with the regular certification process pursuant to Chapter 2, Section 3, first paragraph	Pass
4 § In case of update or changes to information assets in accordance with Section 1, a risk and vulnerability analysis must be carried out.	Pass.
5 § There must be a decision maker appointed to take responsibility for and make decisions regarding each update or change to an information asset.	Passed, FORCE Technology. Have seen Change Management Procedure.
6 § A version management system must contain information regarding requests for changes, approved changes and implemented changes to information assets. Previous versions of information assets must be stored and made available for audit.	Passed, FORCE Technology. Have seen Change Management Procedure. Documentation: Software Development Life Cycle Policy

Chapter 7 Functions for the license holder's game administration

#	Requirement	Remarks
	Activation and deactivation of games	
7.1.1	The licence holder must be able to immediately activate or deactivate each game or its players; either one or more games, or an individual player or all players at once.	Pass, have seen the procedure on how to do it. Documentation: Screen shots and System Access Control Policy FORCE will need to see it with live data.
7.1.2	Measures pursuant to the first paragraph must be registered and documented.	
7.2.1	It must be possible to finish playing a game that has been deactivated	Pass. There are no games with several steps.
7.2.2	For games played in several steps, it must be possible to finish playing the game when the player next logs in.	
	Interrupted games	
7.3.1	It must be possible to finish playing an interrupted game, unless otherwise specified in the rules of the game.	Pass. It is not possible to interrupt this kind of game, as it is betting on lotteries.
7.3.2	An interrupted game must be shown to the player, along with any bets made, once the gambling system is reconnected.	
7.3.3	Bets referred to in the second paragraph must be kept separate and be separately reported in the player's player account until the game is finished.	
7.4.1	If an interrupted game is not finished within 90 days, it must be terminated	Pass, the game rules states what happens if a game is interrupted. It is not possible to interrupt this kind of game. .
7.4.2	The rules of the game must clearly state what will happen to a player's bet if a game is terminated before being finished.	
	Fault management	
7.5.1	There must be documented procedures for all games on how to manage faults and deficiencies	Pass, during audit this was demonstrated during audit to FORCE Certification Documentation: Software Development Life Cycle Policy
7.5.2	The rules of the game must clearly state what applies in relation to the player in the event of faults and deficiencies.	
7.6.1	Any errors and faults that arise must be registered and documented	Pass Documentation: Incident Response Plan
7.6.2	Causes and solutions of errors and faults in the first paragraph must be registered and documented.	
7.7.1	It must be ensured that an interrupted game or other errors and faults will not negatively affect a player's player account or game balance

Chapter 8 Information that a gambling system must be able to generate

#	Requirement	Remarks
8.1.1	It must be possible to create reports, in the gambling system or manually, regarding suspected cheating, as referred to in Chapter 19, Section 6 of the Gambling Act (2018:1138).	Pass, documentation showed to FORCE Certification. Documentation: **"**Using the Polarlotto Back-office", "Using the polarlotto Admin App"
8.1.2	It must be possible to create reports, in the gambling system or manually, regarding suspected cheating, collusion between players, attempted cheating and collusion between players, as well as other registered violations of the terms of use and rules of the game.	
8.1.3	It must be possible to create reports, in the gambling system or manually, regarding illicit manipulation of the outcome of a game subject to betting.	
8.2.1	The gambling system must have a function for generating reports regarding deviations or changes in a player's gambling habits and gambling patterns which result in responsible gambling measures.	Pass, documentation showed to FORCE Certification.
8.3.1	The gambling system must have a function to generate reports for all player registrations.	Pass, documentation showed to FORCE Certification.
8.3.2	The gambling system must have a function to generate reports for all open and closed temporary player accounts referred to in Chapter 13, Section 4, first paragraph of the Gambling Act (2018:1138).	
8.4.1	The gambling system must have a function to generate reports for all registered players, the players' account information and registration dates.	Pass, documentation showed to FORCE Certification.
8.5.1	The gambling system must have a function to generate reports of all players that have excluded themselves from gambling for 24 hours, for a certain period of time or indefinitely, in accordance with Chapter 14, Section 12 of the Gambling Act (2018:1138).	Pass, documentation showed to FORCE Certification.
8.6.1	The gambling system must have a function to generate reports of all players who have set limits in terms of time, bets or deposits to their player account.	Pass, documentation showed to FORCE Certification.
8.6.2	The gambling system must also have a function to generate reports on the number of players who have lowered or raised their limits in terms of time, bets or deposits to their player account.	Pass, documentation showed to FORCE Certification.
8.7.1	The gambling system must have a function to generate reports on inactive player accounts.	Pass, documentation showed to FORCE Certification.

#	Requirement	Remarks
8.8.1	The gambling system must have a function to generate reports on all player accounts that have been closed.	Pass, documentation showed to FORCE Certification.
8.8.2	If a player account has been closed, it must be indicated why it was closed and whether it was closed by the player or the licence holder.	
8.9.1	The gambling system must have a function to generate reports on all player accounts with a positive balance which have been closed for more than five working days.	Pass, documentation showed to FORCE Certification.
8.10.1	The gambling system must have a function to generate a report for each player account.	Pass, documentation showed to FORCE Certification.
8.11.1	The gambling system must have a function to register the full login session of an individual player.	Pass, documentation showed to FORCE Certification.
8.11.2	It must be possible to provide the following in one or more reports in accordance with the first paragraph	
8.11.2.1	1. player ID;	
8.11.2.2	2. start and end time of the login session;	
8.11.2.3	3. player equipment;	
8.11.2.4	4. total bets during the login session;	
8.11.2.5	5. total winnings paid out during the login session;	
8.11.2.6	6. total deposits to player account during the login session (time-stamped);	
8.11.2.7	7. total withdrawals from player account during the login session (time-stamped);	
8.11.2.8	8. time of final confirmation during the login session;	
8.11.2.9	9. reason for terminating a session; and	
8.11.2.10	10. identification of games and versions played during the login session.	
8.12.1	The gambling system must have a function to register and generate one or more reports with information on the player's transactions during the login session.	Pass, documentation showed to FORCE Certification.
8.12.2	It must be possible to provide the following in one or more reports in accordance with the first paragraph	
8.12.2.1	1. player ID;	
8.12.2.2	2. start time of the game;	
8.12.2.3	3. the player's balance at the start of the game;	
8.12.2.4	4. bet (timestamped);

Chapter 9 Functional requirements for the license holder in relation to the players

#	Requirement	Remarks
	Registration of the player and access to the gambling system	
9.1.1	The gambling system must have a function to register players.	Pass, documentation showed to FORCE Certification. ("Specifications of the Betting System")
9.1.2	The player's access must be authorised using a personal and unique access code every time they log in to the gambling system.	
9.2.1	The gambling system must have a function to verify the player's age.	Pass, documentation showed to FORCE Certification
9.3.1	If a PEP check has been performed in accordance with Chapter 3, Section 10 of the Anti-Money Laundering Act (2017:630), the check must be registered in the gambling system.	Pass, documentation showed to FORCE Certification Documentation: "Anti-Money Laudering (AML) Procedures", "4.7 Player Registration & KYC Procedures"
9.4.1	All logins to a player account and all attempted logins must be registered.	Pass, documentation showed to FORCE Certification Documentation: "Using the Polarlotto Back-office, "Using the polarlotto Admin App"
9.4.2	The gambling system must have a function to detect any attempts at unauthorised access to a player account.	
9.4.3	If an unauthorised person has attempted to access a player account, the player must be informed immediately and thereafter in accordance with the agreement between the licence holder and the player.	
9.5.1	A player's identity, and the date and time must be registered each time they log in and out.	Pass, documentation showed to FORCE Certification Documentation: "Using the Polarlotto Back-office, "Using the polarlotto Admin App"
9.5.2	When a player logs in to the gambling system, the time and date of their latest login must be available to the player.	
9.6.1	The gambling system must have a function and documented procedures for the secure change of access codes.	Pass, documentation showed to FORCE Certification Documentation: Software Development Life Cycle Policy
9.6.2	It must not be possible for the licence holder to unilaterally change a player's access code.	
	Player account	
9.7.1	The gambling system must have a function to manage and register all financial transactions going in and out of a player account in accordance with Chapter 13, Section 3 of the Gambling Act (2018:1138).	Pass, documentation showed to FORCE Certification

#	Requirement	Remarks
9.8.1	When funds are deposited into a player account, the licence holder must be able to verify that the account holder for the provided bank card/bank account or other payment service is the same person as the holder of the player account.	Pass, documentation showed to FORCE Certification
9.8.2	The first paragraph still applies if a player changes bank cards, bank accounts or other payment service.	
9.9.1	A player must be able to see their balance in the player account immediately after each completed transaction.	Pass, documentation showed to FORCE Certification
9.9.2	There must be a function to show the player which games they have participated in, all the bets made and all the winnings paid out in accordance with Chapter 13, Section 3, first paragraph of the Gambling Act (2018:1138).	
	Limitations of deposits, losses and login sessions	
9.10.1	For online games, there must be a function for the player to easily set a limit for deposits that can be made each day, week and month.	Pass, documentation showed to FORCE Certification
9.10.2	A player who has not set limits for deposits in accordance with the first paragraph may not gamble.	
9.11.1	For online games, there must be a function where the player can easily limit the time they spend logged in.	Pass, documentation showed to FORCE Certification
9.12.1	There must be a function that can give the player warning messages regarding winnings and losses during the login session as well as information on how long the player has been logged in.	Pass, documentation showed to FORCE Certification
9.13.1	Only the player himself shall be able to set the limits pursuant to Sections 10 and 11.	Pass, documentation showed to FORCE Certification
	Exclusion from gambling	
9.14.1	The gambling system must have a function that allows players to easily exclude themselves temporarily or permanently from a game.	Pass, documentation showed to FORCE Certification
9.15.1	The gambling system must have a function checking for self-exclusion or restricted gambling every time a player registers or logs in to the gambling system.	Pass, documentation showed to FORCE Certification
	Initiated game	
9.16.1	During gambling, there must be a function and documented procedures to prevent the placing of a bet once the time set by the licence holder for lot-drawing or an event which will yield a future result has begun.	Pass, documentation showed to FORCE Certification

Chapter 10 Payout percentage

#	Requirement	Remarks
10.1.1	For games with progressive winnings, the minimum payout percentage must be indicated to the player.	Pass, as there is no progressive winnings. The game provided is betting on lotteries, so there is no payout percentage. The payout percentage is equal to the lotteries payout percentage, which is coherent with the odds.
10.2.1	The gambling system must have a function to monitor the payout percentage of each individual game.	Pass. The game provided is betting on lotteries, so there is no payout percentage. The payout percentage is equal to the lotteries payout percentage, which is coherent with the odds.
10.2.2	Data that is generated in accordance with the first paragraph must be stored and kept available for audit.

Chapter 11 Game instructions, payout table and pot

#	Requirement	Remarks
	Game Instruction	
11.1.1	Game instructions must be complete, unambiguous and non-deceptive.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement. ("Specifications of the betting system"). Also tested on webpage.
11.2.1	Game instructions and rules must be available without placing a bet.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement. ("Specifications of the betting system"). Also tested on webpage.
11.3.1	Game instructions must be available through the same type of medium as the game.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement. ("Specifications of the betting system"). Also tested on webpage.
11.3.2	Game instructions must be easily accessible.	
	Payout table	
11.4.1	There must be documented quality assurance procedures to ensure that the configuration of payout tables is correct.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement. The payout percentage is equal to the lotteries payout percentage, which is coherent with the odds. Documentation: QA Procedure configuration of pay-out tables
11.4.2	There must be documented procedures to ensure that the calculations of payout tables are correct.	
	Pot	
11.5.1	There must be rules for how a player can win a pot.	N/A – No pot
11.5.2	It must be clearly stated how the pot is financed and distributed.	
11.6.1	It must be clear from the rules how a pot will be divided if there is more than one winner.	N/A – No pot
11.7.1	It must be clear from the rules how a licence holder can cancel or terminate a pot.	N/A – No pot

Chapter 12 Abnormal gambling patterns and cheating

This chapter is covered partly by the SGA. Procedures to detect and counteract violations of the terms of use and rules of the game are not included in the assessment of the accredited body but fall under the Swedish Gambling Authority's supervisory responsibilities. The evaluation of whether the licence holder has the relevant competence to make the necessary assessments also fall under the Swedish Gambling Authority's supervisory responsibilities

#	Requirement	Remarks
12.1	The gambling system must have a function, and there must be documented procedures, to detect the occurrence of cheating and collusion between players, attempted cheating and collusion between players, and other violations of the terms of use and rules of the game	Pass. Neither customers nor SverigeLotto's own staff can cheat in a game, because all results are both independent of the bets made and determined externally in the underlying lotteries, not by SverigeLotto. All lines of numbers betted on are also registered with an insurance company before the draw. There is also no opportunity for collusion as all bets are separate entries and don't affect each other.
12.2	The gambling system must have a function that allows players to easily and immediately report suspected cheating, cheating, and collusion between players, attempted cheating and collusion between players, and other violations of the terms of use and rules of the game	
12.3	There must be a function for analysing and producing data for reports on illicit manipulation of the outcome of a game subject to betting	
12.4	There must be documented procedures to detect and counteract deviations and abnormal gambling resulting from manipulation of games and software

Chapter 13 Functional requirements for random number generators

#	Requirement	Remarks
13.1.1	The results from a random number generator must be random, statistically independent, have a correct standard deviation and correct probability distribution. The results yielded by the random number generator must not be predictable without knowledge of the applied algorithm, implementation and initial values.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider. All testing of programming has been performed in-house. As all the lotteries used are tested, inspected and approved by third-party organisations, and as there is no RNG involved on any betting outcome anywhere within our system, we have not required third-party testing of our own. For example, Camelot (who run the UK Lotto), are regulated directly by the UK Gambling Commission: https://www.gamblingcommission.gov.uk/for-the-public/National-Lottery/How-we-regulate-the-National-Lottery.aspx
13.2.1	There must be a documented reference to a well-established algorithm and any source code as well as to the recalculation procedure of the random number generator. If the random number generator is built in to the software, it must be possible to present the entire source code, along with comments and documentation.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.3.1	The random number generator must be able to withstand the set maximum load.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.4.1	Functions that do not generate outcomes in games but which depend on random elements must be based on the results of the random number generator.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.5.1	Calculations based on a random number generator must have a correct standard deviation and correct probability distribution. The numbers, symbols or events resulting from the random number generator must correspond with the rules set for the game involved.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.

#	Requirement	Remarks
13.6.1	The calculations of the random number generator must correspond to the events registered in the gambling system	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.7.1	If the rules of the game requires a sequence from a random number generator to be set in advance, it is only allowed to generate new sequences if this is stated in the rules	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.8.1	Unless otherwise specified in the rules of the game, the results from a random number generate must always be independent of events in the current or previous games.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
	Drawing equipment without a random number generator	
13.9.1	The results from drawing equipment without a random number generator must be random, statistically independent, have a correct standard deviation and correct probability distribution.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.10.1	Independent drawing equipment without a random number generator must be kept locked in with limited access.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
	Drawing equipment for live casino games	
13.11.1	Drawing equipment used in live casino games must be monitored and recorded	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.11.2	The recorded material must show compliance with the rules of the game.	
13.11.3	The recording must register date and time.	
13.12.1	There must be physical access control for the premises used for live casino games and any associated areas.	N/A – there is no RNG used by SverigeLotto Ltd. The RNG used by the different lotteries is approved by the lottery provider.
13.12.2	There must separate access control, at least for different employee categories.

Chapter 14 Functional requirements when agent terminals are used for bets and control

#	Requirement	Remarks
	Agent terminal	
14.1.1	The gambling system must be able to clearly identify an agent terminal.	N/A – SverigeLotto Ltd do not operate any terminals
14.2.1	Communication between an agent terminal and the other parts of the gambling system must be protected during transfer by encryption or equivalent.	N/A – SverigeLotto Ltd do not operate any terminals
14.3.1	Player or payment transactions sent from an agent terminal to other parts of the gambling system must be validated by the terminal at the end of the transaction before printout	N/A – SverigeLotto Ltd do not operate any terminals
	Agent terminal for validation of winnings	
14.4.1	If an agent terminal is used to validate winnings, it must be fitted with a screen intended to communicate information to the player	N/A – SverigeLotto Ltd do not operate any terminals
14.4.2	The following information must be displayed on the screen that is turned towards the player	N/A – SverigeLotto Ltd do not operate any terminals
14.4.2.1	1. form of gambling;	
14.4.2.2	2. bet;	
14.4.2.3	3. cancellation;	
14.4.2.4	4. amount won, or "no win"; and	
14.4.2.5	5. game closed.

Chapter 15 Functional requirements for online games

#	Requirement	Remarks
	Game design	
15.1.1	Games with interactive options must have illustrations that clearly show current and possible bets. Games in accordance with the first paragraph must clearly illustrate the possibility of changing or resetting the current bet.	N/A – no interactive games
15.2.1	Each round must last for at least three seconds. The first paragraph also applies to autoplay functions.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
15.3.1	A player's participation in a game, and the choices made by the player in the gambling system, must be optional. A player must be given a reasonable period of time to consider the consequences of a choice. Repeated choices made by a player in the gambling system must not be able to be placed in a queue	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
	Visual presentation	
15.4.1	The name of the game must be displayed on all pages associated with that particular game.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
15.5.1	The gambling system must have a function that continuously shows the player how long they have been logged in.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
15.6.1	The gambling system must have a function that continuously shows the player their balance throughout the session	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
15.7.1	The bet on a game must be clearly displayed. The player's possible and actual bets, as well as the minimum and maximum bets, must be clearly displayed. The gambling system must have a function that clearly visualises the player's bet, including the total bets in the game.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
15.8.1	A player must be informed that there are factors beyond their control, which may affect the game and its outcome.	N/A – for this kind of game.
15.9.1	The outcome of a game must remain visible for a reasonable period of time.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
15.10.1	Computer-simulated gambling machines must clearly indicate or illustrate which symbols represent a win.	N/A – no computer simulated games
15.10.2	If different combinations of symbols lead to a win, these must be clearly indicated or illustrated.

#	Requirement	Remarks
15.11.1	If the characteristics of a game change temporarily the game must clearly indicate the current status before the next game.	Pass, FORCE Certification received documentation to fulfill the paragraph. The approval is based on game certificates from game supplier
15.12.1	A symbol that is used in a gambling system must have the same shape and colour throughout that particular game.	N/A
15.13.1	The number of active decks as well as which cards are included in a particular game must be clearly indicated.	N/A – not card game
15.13.2	The front of the card must clearly show its suit and rank.	
15.13.3	The rules of the game must clearly state when the cards will be shuffled.	
15.14.1	If a non-traditional die is used in a dice game, this must be made clear to the player.	N/A – no dices
15.14.2	It must be clearly indicated which side of a die wins a game.	
15.15.1	A gambling system must have a function to prevent players playing against themselves	N/A – not possible
15.15.2	A gambling system must have a function to discover and prevent one or more players using the same gambling equipment at the same time.	Pass - FORCE Certification have been though the documentation, and it fulfils the requirement
15.16.1	The current pot amount must be visible to all participating players.	N/A – no pot
15.17.1	A player must immediately be informed of winning the pot	N/A – no pot
15.17.2	Once a pot has been won, all players must be informed of its new value.	
15.17.3	Information pursuant to the second paragraph must also be available to players who have not participated in the specified pot.	
15.18.1	It must be clearly stated if a pot is not available to a player	N/A – no pot
15.18.2	It must be ensured that all information given to the players is correct, regardless of whether or not a pot is available.
